NEW TECNOSICUREZZA LOCKS

TECNOSICUREZZA is proud to present, at the 2022 Security Essen, the new line of locks that completes the solutions proposed to the market.

As a result of an intense commitment to research and development, the new locks are entirely designed, developed and assembled by TECNOSICUREZZA.

New mechanics, new electronics, new connectors and various other improvements make these locks more efficient, safe and with an excellent quality/price ratio.

The new locks are all **VDS certified (UL certification requested)** and are available in the following versions:

- 1) **SWINGBOLT**: with an innovative mechanism that guarantees with certainty whether the state of the bolt is "open" or "closed"; new microswitch integration options; single-tooth sintered steel latch for optimum grip; simplified wiring.
- 2) **DEADBOLT**: with anti-perforation reinforcement; minimized backlash; simplified wiring. Available in both the EU and US standard with regard to both the thread and the center distance of the bolt holes.
- 3) **LATCHBOLT**: ideal solution especially for inner safe departments, has a new simplified wiring.

The range naturally includes the already available 3 versions of Motorlock Standard, MotorLock Push & Pull, Motor Latchbolt Lock.

The main innovations of the new Tecnosicurezza locks are:

- **Increased Audit Trail**: 8,000 events with Pulse PRO / Digitech systems, 11,000 with Minitch systems, 15,000 with Techmaster systems
- **New Pico-SPOX connectors**: for an easier cabling in reduced spaces

- **Superior strength:** validated by intensive stress tests.
- **Tecnosicurezza “Guarantee”:** Since 1983 we have been a leader in Italy in the design, construction and marketing of locks, systems and services for the safety of safes.

SECURITY ESSEN: TECNOSICUREZZA IS PRESENT

SECURITY ESSEN fair: from the 20th to the 23rd of September 2022 at Essen Messe (Germany)

Tecnosicurezza will be present with its stand at the next Security fair in Essen, Germany. The biggest world security event will see us as protagonists with all the news of the new range of locks (but not only these).

It will be possible to find us in **Hall 6 at booth E12.**

We look forward to seeing you.

NEW CORENWEB and CORENAPP

CorenWEB and CorenAPP will be premiered during the fair.

The 2 programs, through the connection to the TECNOSICUREZZA IP interface, allow remote management of the Techmaster system of keypads and locks.

The software, installed on the webserver, allows security managers to constantly monitor the connected locks and manage them remotely both from a PC and through the APP on a mobile device.

The main innovations are:

- **Management of remote control from mobile device.**
- **Cloud Solution:** Multiplatform software installed on webserver that guarantees operational continuity and greater speed in operations.
- **Multiple users' management:** even in simultaneous access from different locations.
- **Possibility of customizing functions** according to needs.
- **Backwards compatibility** with previous TECNOSICUREZZA systems.
- **Continuous monitoring:** The software is not dependent on the state of a local machine. It is possible to configure the software to automatically receive notifications in real time through pop-ups and / or emails.

Come and visit us at the stand to try CorenWeb and CorenApp.
