PRODUCTS UPDATES

Who said that good products can not be improved?

In Tecnosicurezza we believe there is always room to improve something good and that's why we are always looking for ways to perfect or add features to our products.

Having an in-house R&D department allow us to adapt quickly and stay in tune with the market's changing needs.

Listed below are some technical improvements that have just been introduced on some of our lock systems.

MiniTech: The number of users has been increased to 50 users + 10 override users. The previous version had 9 users + 1 override user.

Furthermore, you can now download the audit trail or programming the lock through a direct connection with the PC by means of the N42170/M magnetic Dallas key connection cable.

Like for the old version, it is still possible to perform these operations using an Audit/Setup Dallas key.

DigiTech: The number of users has been increased to 30 users (including 1 override user). The previous version had 9 users + 1 override user.

Furthermore, you can now download the audit trail or programming the lock through a direct connection with the PC by means of the N42170/M magnetic Dallas key connection cable.

Like for the old version, it is still possible to perform these operations using an Audit/Setup Dallas key.

Touch manager: The number of users has been increased to 50 users (the previous version had 10 users).

FOCUS ON NEW PRODUCTS: T9355 AND T9355/IP

Always with a view to continuous improvement of our solutions, from the past November is available the new I/O interface, in both variants, without IP module (model T9355) and with IP module (model T9355/IP).

These interfaces replaced the old models T9350 and T9350/IP.

The first thing that catches the eye looking at this new model is its new design.

The housing dimensions are more compact and in its sleek design is now easily recognizable the Tecnosicurezza trademark.

Inside the whole circuit has been redesigned and the number of inputs and outputs has been optimized; now there are 2 inputs and 2 outputs.

One of the major improvements is that, unlike the previous model, the inputs and outputs do not have a predefined function, but their function can be selected between different options when programming the interface.

Another important new feature is that among the various selectable functions, there is the possibility to manage remotely one input and one output, using an updated version of the Coren remote management software.

A further very visible innovation on the new interface is the new terminal block. The traditional screw terminal block has been replaced by a modern spring terminal block and thanks to this, the wiring is more simplified, thus cutting installation time and therefore saving money.

EXPANDING OUR WEB PRESENCE

In order to be closer to our customers, more and more international, our company web site is now available also in the Spanish language.

With this addition, the new Tecnosicurezza website, launched the last autumn, is now available in Italian, English and Spanish.

Another news related to our website, it is the possibility to select in which language you prefer to receive the newsletter when subscribing to it.

As for the website, the newsletter is available in Italian, English and Spanish.

In Tecnosicurezza we strongly believe in the new technologies as a tool to be closer to our customers and to offer a better service, for this reason we encourage you to send us any comments or suggestions you may have.

Stay tuned for more exciting news!
