## PULSE PRO RECEIVES VDS AND UL CERTIFICATIONS

It is with a great pleasure that we announce that Pulse PRO high security safe lock system receives VdS (class 2) and UL (type 1) certifications.

Pulse PRO is a new generation safe lock system that has innovative features not normally found in its class.

These include the possibility to program the lock via keypad (more than 80 pre-programmed configurations available), an audit trail with time and date (up to 5500 events), dual code mode, up to 2 masters, 3 managers, 49 users and 10 override users.

Like all Tecnosicurezza products, Pulse PRO is manufactured according to the highest quality standards, ensuring maximum reliability and durability of the product.

As a guarantee of this, Tecnosicurezza has always been active in certifying its locks at the most important certification bodies.

VdS is an independent institution which has been ensuring safety and trust in the fields of fire protection and security for many decades.

Underwriters Laboratories (UL) is an independent product safety certification organization that has been testing products and writing Standards for Safety for over a century.

VdS and UL certifications create confidence and provide the assurance that components, equipment, systems correspond with the highest testing standards and are a differentiator within the security market.

The VdS class 2 certification also certifies that Pulse PRO high security electronic locks fulfil the requirements of the European standard EN 1300 – class B.

A copy of the certifications can be downloaded from the Tecnosicurezza website or directly from this link:

## TECNOSICUREZZA INC EXHIBITED AT ATMIA US CONFERENCE

We are pleased to announce that the last July, in order to expand our presence to the US market, we opened our US branch, Tecnosicurezza Inc.

As the first event for introducing ourselves to the US market we chose the ATMIA USA's annual conference and expo, the largest ATM-focused event in the world.

The 2018 edition took place in the beautiful setting of Las Vegas, at the Wynn resort from 6<sup>th</sup> to 8<sup>th</sup> February.

According to a press release, this year's edition set a new record for attendance, attracting 1,129 industry executives from all sectors of the industry.

Therefore, it was an important opportunity to showcase our product lines, from Pulse PRO to TechMaster.

Particular interest was shown to MiniTech and TechMaster safe lock systems. The first for offering advanced features such as One Time Code at an unbeatable price on the market, the latter for its IP remote management capabilities. The show was a success for us and we aim to match the same success at the next show we will attend. From 25<sup>th</sup> to 28<sup>th</sup> April we will exhibit at 45th Annual FSPA Conference & Showcase which will be held at Atlanta Hilton.

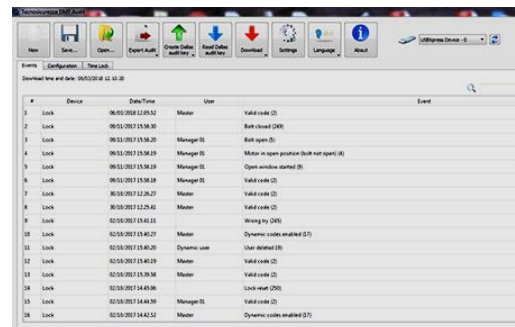

We hope many of you will come!

## NEW SOFTWARE

In order to make the use of our systems more and more simple and effective, this March we have released new versions of some of our software.

The first change concerns the Audit software.

With the aim of simplify the Audit trail download operations, we have released a new audit software that can be used with DigiTech, MiniTech and TechMaster. In case you have different models of our lock systems, you will not have to install different software anymore, just one.

With the Audit software it is possible to download the audit trail directly through a cable (in this case it is possible to download all the events in the lock memory) or through a Dallas key (in this case it will be possible to download a maximum of 1200 events).

A further innovation concerns the supported operating systems: in addition to the Windows platform this software is available for MacOS.

A second major update covered the setup software for Pulse PRO. Also in this case the software is available for both Windows operating system and MacOS. For more information about this software, please contact us.

Last but not least a further innovation concerning the locks.

In the DigiTech, MiniTech and TechMaster (the Pulse PRO already had this feature) is now possible to enable/disable the automatic closing of the Motorlocks simply by keypad.

Therefore It will no longer be necessary to request this feature when purchasing the product.
