

# TECNO NEWS

Issue no. 6

June 2020

## LIGHTED PULSE KEYPAD

The Pulse keypad line, appreciated all over the world for its elegant design and the robustness of its metal body, has been enriched with a new version with lighting.

Thanks to the lighting, it is possible to operate the lock even in dark environments, making the Pulse the perfect solution for safes located in darker areas, or that may need to be opened in the dark.

The lighting, provided by two white LEDs, comes out of a thin light guide positioned just above the keys, which allows an ideal illumination of all keys.

The thin transparent line incorporates in the central position also the red signalling LED normally present in all Pulse keypads.

The VdS certification for this new keypad will be available soon.

## NEW PRICE LIST

It is with pleasure that we communicate that a new Tecnosicurezza price list is available and it will come into force on June 1st.

In addition to collecting all the prices of the items introduced after the introduction of the previous price list, the new price list presents several interesting news.

The first novelty is the introduction of a lighted keypad in the Pulse series, presented in the previous article of this newsletter.

Continuing to talk about the Pulse, it has been added a new keypad with a golden finish.

Another important change that you will notice is that from Pulse Pro onwards, all keypads are now equipped with a rubber membrane, which guarantees greater reliability and robustness even in the most demanding applications.

Another innovation introduced is the version for Mac computers of the USB interface. With this interface it will be possible to use the Mac versions of the Tecnosicurezza Audit and Setup software.

Last but not least, in the new price list you can find DyamaWeb, the Tecnosicurezza advanced solution for the One Time Codes.

If you require additional information, please do not hesitate to contact your usual sales manager or our sales department.

## AESTHETIC UPDATES

The improvement of our products on a technical level go hand in hand with the aesthetic updates, because we are aware that a beautiful keypad makes your safe more beautiful.

With this in mind, we have renewed the font of the keys of the keypads in all our range of safe lock systems.

The new font is modern, elegant and essential and fully reflects the spirit of Tecnosicurezza regarding the constant innovation of its products.

Along with the font change, we made another small modification to improve clarity, we replaced the key with the symbol ✓ with the OK key.

We also want to remind that with the issue of the new price list, Pulse Pro, DigiTech, MiniTech and TechMaster keypads are equipped with the rubber membrane as standard.

Another change introduced is the new screen protector of DigiTech keypad, whose hue matches perfectly with the colour of the DigiTech housing, adding a touch of elegance to the product.
