PULSE RECEIVES A2P CERTIFICATION

It is with pleasure that we communicate that Pulse safe lock system obtained the A2P safe locks certification - class B by the CNPP.

A2P stands for "Assurance Prévention Protection" and It is a safety and resistance French certification issued by the Centre national de prévention et de protection.

In addition to being a further confirmation of the quality and reliability of our safe locks, we believe that the addition of this certification will be appreciated by our customers operating in the French market.

A copy of the certification can be easily downloaded from our website in the product page of the Pulse. <https://www.tecnosicurezza.it/prodotti-pulse.php>

LIGHTED PULSE KEYPAD RECEIVES VDS CERTIFICATION

It is with a great pleasure that we announce that the new lighted Pulse keypad is now included in the VdS class 2 certification of the Pulse lock system.

The lighted Pulse keypad is a new addition to the Pulse family, with its keypads already appreciated all over the world for its elegant design and the robustness of its metal body.

Thanks to the lighting, it is possible to operate the lock even in dark environments, making the Pulse the perfect solution for safes located in darker areas, or that may need to be opened in the dark.

Staying on the topic of certifications, the VdS class 2 certification of TechMaster has been renewed.

The renewal required a series of new tests since that the latest revision of the EN 1300 standard (the regulation to which the VdS certification refers) introduced some changes.

The most recent update was increasingly dedicated to attacks on electronic controls by various means, including attacks using electromagnetic rays or the targeted application of electrical voltages. As a result, new immersion, EMC and ESD tests have been defined.

By choosing the Tecnosicurezza safe lock systems you will have the guarantee of a system that complies with all the latest security standards.

A copy of the certifications can be easily downloaded from our website in the product pages. <https://www.tecnosicurezza.it/prodotti.php>

NEW LANGUAGES

Tecnosicurezza safe lock systems are now well established in many markets all over the world, and in order to make their use easier to the end users, new languages are added to our systems and software.

We therefore would like to inform you that we have recently added Slovak and Turkish to the languages available for the TechMaster safe lock system.

Furthermore, we added the following languages to the One Time Codes web software DyamaWeb: Czech, Slovak, Portuguese, Swiss (German), Finnish, French, Turkish, German.

These languages are in addition to the Italian, English and Spanish which were already available.

Do not hesitate to contact us to know all the languages available in our systems or to request the implementation of a new language.
