

We Slow Down Today to Move Faster Tomorrow

In recent months, Tecnosicurezza has achieved excellent results, thanks to steadily growing demand and renewed confidence from customers and partners. This positive trajectory is driving us to further enhance our production capabilities.

To support this momentum and strengthen our ability to respond to market needs, we have launched a major program to upgrade and optimize our production lines. This strategic initiative will enable us to streamline and better integrate our processes, reduce repetitive activities, and improve overall efficiency. The innovation introduced will lead to a significant increase in operational performance, further enhancing our order fulfillment capabilities and ensuring even higher quality standards.

The implementation phase will require a temporary adjustment of production activities during the month of August and has been structured to minimize operational impact, with most of the work concentrated around our traditional summer shutdown (week 33).

Within this framework, we are working closely with customers and partners to plan supply schedules as effectively as possible and, where necessary, identify the best solutions to ensure continuity and reliability of service.

Our sales representatives are available to assist you in developing solutions tailored to your specific operational needs.

This investment represents another important step in our growth and innovation journey, reflecting our commitment to creating long-term value for all stakeholders and to responding ever more effectively to an evolving market.

We will continue to share updates on the progress of this project and remain fully committed to maintaining high standards of quality and service.
